Art Unit: 1771

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. More particularly, the recent claim amendments to claim 1 (which appear to find support in, e.g. original claim 1 but not in paragraphs [0001], first sentence, and [0007], last sentence, of the specification as stated by applicant) appear to have made that claim into what the Examiner believes is an undesired kit claim formed of a silicon wafer, a dicing support tape and a dicing die bonding film "disposed between" the two aforementioned elements. Claim 9 is now a dependent claim improperly dependent upon a multiple dependent claim. Additionally, in claim 3 "thermoplastic" has two different spellings in the claim; the first is believed proper.
3. The amendment filed January 31, 2006 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the amendment to paragraph [0010] of the specification, last line changing the weight % range of the filler which can be present from 1-80% to 1-55% is clearly new matter. The fact that the weight % of the filler can never be above about 55% if the weight % ranges for the other components are accurate does not permit applicant to change the specification in the manner attempted by applicant..

Applicant is required to cancel the new matter in the reply to this Office Action.

4. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akada et al, substantially for the reasons set forth in Paragraph No. 4 of Paper No. 120605, together with the following additional observations. More particularly, the reference is believed to at least render obvious the newly claimed kit type arrangement found in applicant's independent claim, with the adhesion performance parameter in the last two lines of the claim again believed to be, if not inherent, an obvious optimization of bonding properties in the same or substantially similar technical environments. As regards applicant's contention (Response, paragraph bridging pages 6-7) that the "invention does not require UV- exposure to enable release from the substrate (dicing tape)" the Examiner can only note that such a limitation is neither expressly or inherently present in the claims. With respect to dependent claims 3-7 these are again believed to define adhesive compositions that are, if not expressly disclosed, are obvious modifications to one of ordinary skill, in the absence of unexpected results.

5. Claims 8 and 9 are not rejected on the basis of adverse prior art.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 1771

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
